Journal of Materials Processing Technology 134 (2003) 422–426

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 134

Advancing front
Boundary controlled automatic remeshing for 2D simulation of metal forming, 108
Aeroengine alloys
An overview of the machinability of aeroengine alloys, 233
Air cooling
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Alumina
Temperature distribution at steady state under constant current discharge in spark sintering process of Ti and Al_2O_3 powders, 225
Aluminium
3D FEM simulation of the whole cycle of aluminium extrusion throughout the transient state and the steady state using the updated Lagrangian approach, 383
Aluminum
Constitutive equations for the room temperature deformation of commercial purity aluminum, 398
Aluminum composites
An investigation on underwater shock consolidated carbon fiber reinforced Al composites, 329
Aluminum extrusion
A study of die failure mechanisms in aluminum extrusion, 318
Aluminum strip
Experimental study on material properties of hot rolled and continuously cast aluminum strips in cold rolling, 363
AM60B magnesium alloy
Drilling a magnesium alloy using PVD coated twist drills, 287
Arbitrary shaped drawing
Optimal blank shape design using the initial velocity of boundary nodes, 92
Asymmetric rolling
Investigations into the influence of asymmetric factors and rolling parameters on strip curvature during hot rolling, 180
Austenite
Formation of ultrafine grained ferrite in low carbon steel by heavy deformation in ferrite or dual phase region, 19
Austenitic stainless steel
Submerged arc welding of stainless steel and the challenge from the laser welding process, 174

Background mesh
Boundary controlled automatic remeshing for 2D simulation of metal forming, 108
Blank
Properties of hemispherical cups drawn using a flexible tool, 310
Boriding
Deposition of hard and/or corrosion resistant, single and multi-element coatings on ferrous and nonferrous alloys in a fluidized bed reactor, 145
Bump plating
An improved procedure for bump plating of planar diodes, 210

Butt-joint
Numerical simulation of the laser welding process in butt-joint specimens, 59

CADCAM
A case of reverse engineering for the manufacture of wide chord fan blades (WCFB) used in Rolls Royce aero engines, 279
Carbon fiber reinforcements
An investigation on underwater shock consolidated carbon fiber reinforced Al composites, 329
Carbon fibre
Electrostatic painting of conductive composite materials, 303
C–C composite
Reaction of C–C composites with WSi_2 and its effect on thermal conductivity, 197
Ceramic
Fabrication and properties of Fe_3Al–Al_2O_3 graded coatings, 206
Ceramic fracture
A numerical and experimental study of fracture in RP stereolithography patterns and ceramic shells for investment casting, 135
Chatter vibration
Parametrical excitement vibration in tandem mills—mathematical model and its analysis, 214
Coating
Fabrication and properties of Fe_3Al–Al_2O_3 graded coatings, 206
Cold rolling
Experimental study on material properties of hot rolled and continuously cast aluminum strips in cold rolling, 363
Cold-forging
Forming analysis of a tubular connecting bolt, 53
Complex forging
KOBO Type Forming: forging of metals under complex conditions of the process, 120
Composite material
Electrostatic painting of conductive composite materials, 303
Concurrent engineering
The development of a database system to optimise manufacturing processes during design, 374
Conjugate gradient method
Parallel processing of 3D rigid-viscoplastic finite element analysis using domain decomposition and modified block Jacobi preconditioning technique, 254
Constitutive equations
Constitutive equations for the room temperature deformation of commercial purity aluminum, 398
Continuous casting
Experimental study on material properties of hot rolled and continuously cast aluminum strips in cold rolling, 363
Critical strain
Finite element analysis of hot forging with flow softening by dynamic recrystallization, 153
CrN
Drilling a magnesium alloy using PVD coated twist drills, 287

Elsevier Science B.V.
PII: S0924-0136(03)00203-6

Cubic boron nitride
Experimental investigation on cubic boron nitride turning of hardened AISI 52100 steel, 1
Cutting forces
Development of an aggregate indicator to assess the machinability of steels, 159

Design
The development of a database system to optimise manufacturing processes during design, 374
DFM
The development of a database system to optimise manufacturing processes during design, 374
Die failure
A study of die failure mechanisms in aluminum extrusion, 318
Distortions
Numerical simulation of the laser welding process in butt-joint specimens, 59
Drill wear
Effect of pulsed magnetic treatment on drill wear, 190
Drilling
Drilling a magnesium alloy using PVD coated twist drills, 287
Duplex stainless steel
Submerged arc welding of stainless steel and the challenge from the laser welding process, 174
Dynamic recrystallization
Formation of ultrafine grained ferrite in low carbon steel by heavy deformation in ferrite or dual phase region, 19
Finite element analysis of hot forging with flow softening by dynamic recrystallization, 153
Dynamics contributions
Improvement of implicit finite element code performance in deep drawing simulations by dynamics contributions, 413

Electrostatic painting
Electrostatic painting of conductive composite materials, 303
Energy-saving deformation
KOBO Type Forming: forging of metals under complex conditions of the process, 120
Epoxy fracture
A numerical and experimental study of fracture in RP stereolithography patterns and ceramic shells for investment casting, 135
Explosive compaction
An investigation on underwater shock consolidated carbon fiber reinforced Al composites, 329
Extrusion
3D FEM simulation of the whole cycle of aluminium extrusion throughout the transient state and the steady state using the updated Lagrangian approach, 383

Failure modes
An experimental study of hydroforming deep drawing, 70
FDM
Temperature distribution at steady state under constant current discharge in spark sintering process of Ti and Al_2O_3 powders, 225
FEM
Finite element analysis of hot forging with flow softening by dynamic recrystallization, 153
An integrated model for hot rolling of steel strips, 338
Ferrite
Formation of ultrafine grained ferrite in low carbon steel by heavy deformation in ferrite or dual phase region, 19
Fine-blanking
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Finite element method
Numerical simulation of the laser welding process in butt-joint specimens, 59
Finite element simulation of the punching/blanking process using in-process characterisation of mild steel, 296
Finite element model
Investigations into the influence of asymmetric factors and rolling parameters on strip curvature during hot rolling, 180
Finite element technique
Weldbonding strengthens and balances the stresses in spot-welded dissimilar thickness joints, 352
Finite-element computer modelling
3D FEM simulation of the whole cycle of aluminium extrusion throughout the transient state and the steady state using the updated Lagrangian approach, 383
Flow softening
Finite element analysis of hot forging with flow softening by dynamic recrystallization, 153
Fluidized bed reactor
Deposition of hard and/or corrosion resistant, single and multi-element coatings on ferrous and nonferrous alloys in a fluidized bed reactor, 145
Forming
Forming analysis of a tubular connecting bolt, 53
Forming pressure
An experimental study of hydroforming deep drawing, 70
Fractal modelling
Hybrid approach to surface roughness evaluation in multistage machining processes, 265
Free forging
Optimal preform design for the free forging of 3D shapes by the sensitivity method, 99
Friction behaviour
A finite element simulation of micro-mechanical frictional behaviour in metal forming, 81
Friction coefficient
Constitutive equations for the room temperature deformation of commercial purity aluminum, 398

Gas-blow forming
Modelling the effects of grain-size gradients on necking in superplastic forming, 10
Grain-size evolution
Modelling the effects of grain-size gradients on necking in superplastic forming, 10
Grinding burn
Significance of grinding burn on high speed steel tool performance, 166

Hard turning
Experimental investigation on cubic boron nitride turning of hardened AISI 52100 steel, 1
Hardness
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Heavy deformation
Formation of ultrafine grained ferrite in low carbon steel by heavy deformation in ferrite or dual phase region, 19
Hemispherical cups
Properties of hemispherical cups drawn using a flexible tool, 310
Heterogeneous plastic flow
KOBO Type Forming: forging of metals under complex conditions of the process, 120
High dilution
Submerged arc welding of stainless steel and the challenge from the laser welding process, 174

High-pressure
Continuous jet penetration of solid materials, 115
Hot deformation
Formation of ultrafine grained ferrite in low carbon steel by heavy deformation in ferrite or dual phase region, 19
Hot forging
Finite element analysis of hot forging with flow softening by dynamic recrystallization, 153
Hot isostatic pressing
Production scale processing of a new intermetallic NiAl–Ta–Cr alloy for high-temperature application. Part II. Powder metallurgical production of bolts by hot isostatic pressing, 273
Hot rolling
Experimental study on material properties of hot rolled and continuously cast aluminum strips in cold rolling, 363
Hot strip rolling
An integrated model for hot rolling of steel strips, 338
HSLA steels
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
HSS tools
Significance of grinding burn on high speed steel tool performance, 166
Hydroforming deep drawing
An experimental study of hydroforming deep drawing, 70

IDEF
The development of a database system to optimise manufacturing processes during design, 374
Implicit finite element code
Improvement of implicit finite element code performance in deep drawing simulations by dynamics contributions, 413
Initial nodal velocity (INOV)
Optimal blank shape design using the initial velocity of boundary nodes, 92
In-process control
Finite element simulation of the punching/blanking process using in-process characterisation of mild steel, 296
Interfacial bonding
An investigation on underwater shock consolidated carbon fiber reinforced Al composites, 329
Intermetallic
Fabrication and properties of Fe_3Al–Al_2O_3 graded coatings, 206
Production scale processing of a new intermetallic NiAl–Ta–Cr alloy for high-temperature application. Part II. Powder metallurgical production of bolts by hot isostatic pressing, 273
Intermetallic phases
Submerged arc welding of stainless steel and the challenge from the laser welding process, 174

Laser welding
Numerical simulation of the laser welding process in butt-joint specimens, 59
Limiting drawing ratio
An experimental study of hydroforming deep drawing, 70

Machinability
Development of an aggregate indicator to assess the machinability of steels, 159
An overview of the machinability of aeroengine alloys, 233
Machinability testing
Development of an aggregate indicator to assess the machinability of steels, 159
Machining chips
The effects of metal filler on the characteristics of casting resin for semi-metallic soft tools, 26
Machining operation
Hybrid approach to surface roughness evaluation in multistage machining processes, 265
Magnetic treatment
Effect of pulsed magnetic treatment on drill wear, 190
Material cutting
Continuous jet penetration of solid materials, 115
Material flow
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Material properties
Experimental study on material properties of hot rolled and continuously cast aluminum strips in cold rolling, 363
Material status
Significance of grinding burn on high speed steel tool performance, 166
Mathematical model
Parametrical excitement vibration in tandem mills—mathematical model and its analysis, 214
An integrated model for hot rolling of steel strips, 338
Mechanical properties
Electrostatic painting of conductive composite materials, 303
Medium carbon steels
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Metal flow
3D FEM simulation of the whole cycle of aluminium extrusion throughout the transient state and the steady state using the updated Lagrangian approach, 383
Metal forming
A finite element simulation of micro-mechanical frictional behaviour in metal forming, 81
Boundary controlled automatic remeshing for 2D simulation of metal forming, 108
Metal-forming process
A study of die failure mechanisms in aluminum extrusion, 318
Metallurgical transformations
Numerical simulation of the laser welding process in butt-joint specimens, 59
Microhardness
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Micro-mechanical contact
A finite element simulation of micro-mechanical frictional behaviour in metal forming, 81
Microstructural morphology
An investigation on underwater shock consolidated carbon fiber reinforced Al composites, 329
Microstructure of strip
An integrated model for hot rolling of steel strips, 338
Modified block Jacobi preconditioner
Parallel processing of 3D rigid-viscoplastic finite element analysis using domain decomposition and modified block Jacobi preconditioning technique, 254
Multielement coatings
Deposition of hard and/or corrosion resistant, single and multielement coatings on ferrous and nonferrous alloys in a fluidized bed reactor, 145

Nd:YAG laser welding
Submerged arc welding of stainless steel and the challenge from the laser welding process, 174
Necking
Modelling the effects of grain-size gradients on necking in superplastic forming, 10

Neural network
Hybrid approach to surface roughness evaluation in multistage machining processes, 265
Nickel-based alloys
An overview of the machinability of aeroengine alloys, 233
Nitrogen alloying
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405

Optimal blank design
Optimal blank shape design using the initial velocity of boundary nodes, 92

Parallel processing
Parallel processing of 3D rigid-viscoplastic finite element analysis using domain decomposition and modified block Jacobi preconditioning technique, 254
Paving
Boundary controlled automatic remeshing for 2D simulation of metal forming, 108
Penetration
Continuous jet penetration of solid materials, 115
Periodic reverse Electroplating
An improved procedure for bump plating of planar diodes, 210
Planar diode
An improved procedure for bump plating of planar diodes, 210
Planar P^+–N junction
An improved procedure for bump plating of planar diodes, 210
Plasma spray
Fabrication and properties of Fe_3Al–Al_2O_3 graded coatings, 206
Plastic deformation
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Constitutive equations for the room temperature deformation of commercial purity aluminum, 398
Potential distribution
Temperature distribution at steady state under constant current discharge in spark sintering process of Ti and Al_2O_3 powders, 225
Powder metallurgy
Production scale processing of a new intermetallic NiAl–Ta–Cr alloy for high-temperature application. Part II. Powder metallurgical production of bolts by hot isostatic pressing, 273
Precipitation strengthening
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Preconditioning technique
Parallel processing of 3D rigid-viscoplastic finite element analysis using domain decomposition and modified block Jacobi preconditioning technique, 254
Preform design
Optimal preform design for the free forging of 3D shapes by the sensitivity method, 99
Press working
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Prior austenite grain size
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Proeutectoid ferrite
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Pulse Electroplating
An improved procedure for bump plating of planar diodes, 210

Punching/blanking
Finite element simulation of the punching/blanking process using in-process characterisation of mild steel, 296

Quadrilateral mesh
Boundary controlled automatic remeshing for 2D simulation of metal forming, 108

Rapid prototyping
A numerical and experimental study of fracture in RP stereolithography patterns and ceramic shells for investment casting, 135
Rapid prototyping and tooling
The effects of metal filler on the characteristics of casting resin for semi-metallic soft tools, 26
Rapid tooling
A numerical and experimental study of fracture in RP stereolithography patterns and ceramic shells for investment casting, 135
Reaction
Reaction of C–C composites with WSi_2 and its effect on thermal conductivity, 197
Remeshing
Boundary controlled automatic remeshing for 2D simulation of metal forming, 108
Reverse engineering
A case of reverse engineering for the manufacture of wide chord fan blades (WCFB) used in Rolls Royce aero engines, 279
Rigid-viscoplastic approach
Parallel processing of 3D rigid-viscoplastic finite element analysis using domain decomposition and modified block Jacobi preconditioning technique, 254
Roll life
An integrated model for hot rolling of steel strips, 338

Scale thickness
An integrated model for hot rolling of steel strips, 338
Secondary hardening
Significance of grinding burn on high speed steel tool performance, 166
Semi-metallic soft tool
The effects of metal filler on the characteristics of casting resin for semi-metallic soft tools, 26
Sensitivity method
Optimal preform design for the free forging of 3D shapes by the sensitivity method, 99
Shearing conditions
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Shearing process
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Sheet forming process
Improvement of implicit finite element code performance in deep drawing simulations by dynamics contributions, 413
Silicon alloying
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Spark sintering
Temperature distribution at steady state under constant current discharge in spark sintering process of Ti and Al_2O_3 powders, 225
Spot-welded joints
Weldbonding strengthens and balances the stresses in spot-welded dissimilar thickness joints, 352

Steady state
Constitutive equations for the room temperature deformation of commercial purity aluminum, 398
Steel
Forming analysis of a tubular connecting bolt, 53
Stereolithography
A numerical and experimental study of fracture in RP stereolithography patterns and ceramic shells for investment casting, 135
Strain distribution
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Forming analysis of a tubular connecting bolt, 53
Strain measurement
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Strip curvature
Investigations into the influence of asymmetric factors and rolling parameters on strip curvature during hot rolling, 180
Submerged arc welding
Submerged arc welding of stainless steel and the challenge from the laser welding process, 174
Superplasticity
Modelling the effects of grain-size gradients on necking in superplastic forming, 10
Effect of prior β processing on superplasticity of $(\alpha + \beta)$ thermomechanically treated Ti–632Si alloy, 35
Surface roughness
Development of an aggregate indicator to assess the machinability of steels, 159
Hybrid approach to surface roughness evaluation in multistage machining processes, 265
SYSWELD code
Numerical simulation of the laser welding process in butt-joint specimens, 59

Tandem rolling mill
Parametrical excitement vibration in tandem mills—mathematical model and its analysis, 214
Temperature
3D FEM simulation of the whole cycle of aluminium extrusion throughout the transient state and the steady state using the updated Lagrangian approach, 383
Thermal analysis
Temperature distribution at steady state under constant current discharge in spark sintering process of Ti and Al_2O_3 powders, 225
Thermal conductivity
Reaction of C–C composites with WSi_2 and its effect on thermal conductivity, 197
Thermo-mechanical analysis
Numerical simulation of the laser welding process in butt-joint specimens, 59
Thermomechanical behavior of strip and roll
An integrated model for hot rolling of steel strips, 338
Thermo-mechanical processing
Effect of prior β processing on superplasticity of $(\alpha + \beta)$ thermomechanically treated Ti–632Si alloy, 35
TiN
Drilling a magnesium alloy using PVD coated twist drills, 287
Titanium
Temperature distribution at steady state under constant current discharge in spark sintering process of Ti and Al_2O_3 powders, 225
An overview of the machinability of aeroengine alloys, 233
Titanium alloy
Effect of prior β processing on superplasticity of $(\alpha + \beta)$ thermomechanically treated Ti–632Si alloy, 35
Titanium alloying
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Tool performance
Significance of grinding burn on high speed steel tool performance, 166
Tool wear
Experimental investigation on cubic boron nitride turning of hardened AISI 52100 steel, 1
Tungsten silicide
Reaction of C–C composites with WSi_2 and its effect on thermal conductivity, 197

Urethane
Properties of hemispherical cups drawn using a flexible tool, 310

Vanadium alloying
The effect of silicon, vanadium and nitrogen on the microstructure and hardness of air cooled medium carbon low alloy steels, 405
Viscoplasticity method
Material flow analysis on shearing process by applying Fourier phase correlation method—analysis of piercing and fine-blanking, 45
Visioplasticity
Forming analysis of a tubular connecting bolt, 53

Water jet
Continuous jet penetration of solid materials, 115
Wear evolution
Drilling a magnesium alloy using PVD coated twist drills, 287
Weldbonding
Weldbonding strengthens and balances the stresses in spot-welded dissimilar thickness joints, 352

ZrN
Drilling a magnesium alloy using PVD coated twist drills, 287
